

Total cells per embryo

Per-embryo cell counts for selected test cell types

Cells per embryo

hypochord

notochordal cell

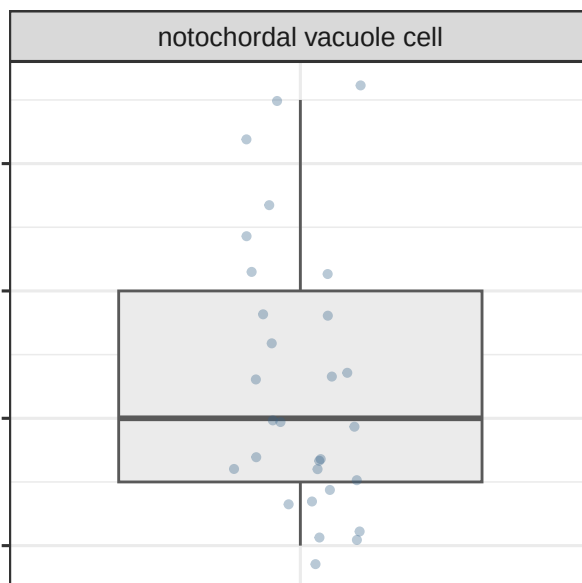

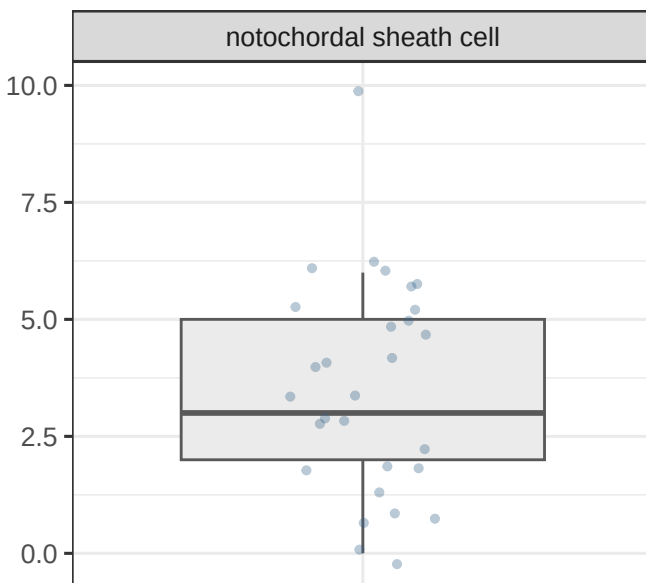

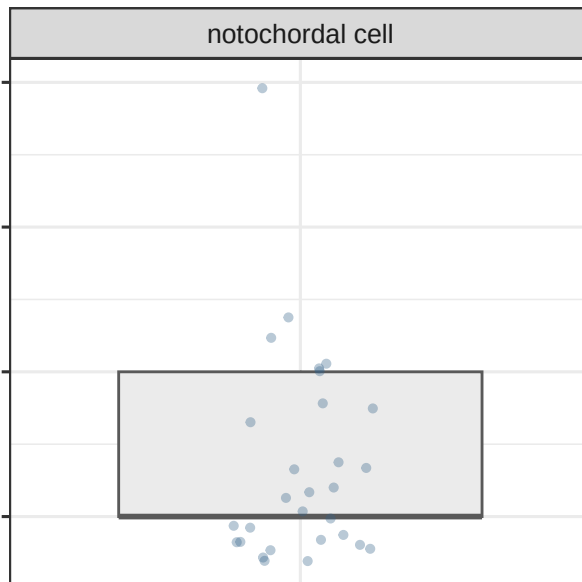

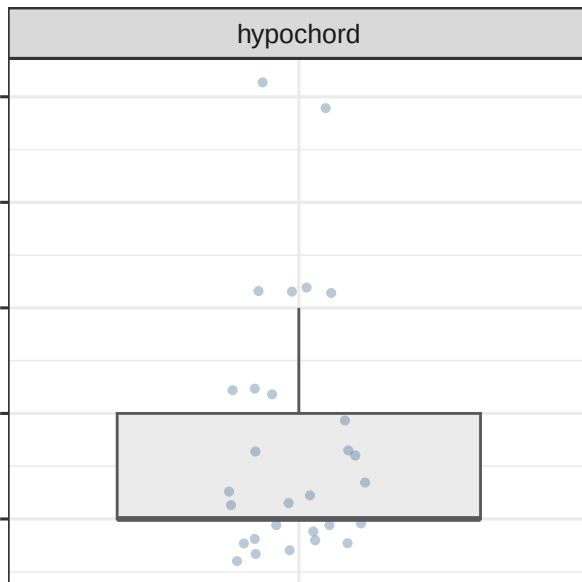

notochordal sheath cell

notochordal vacuole cell

36

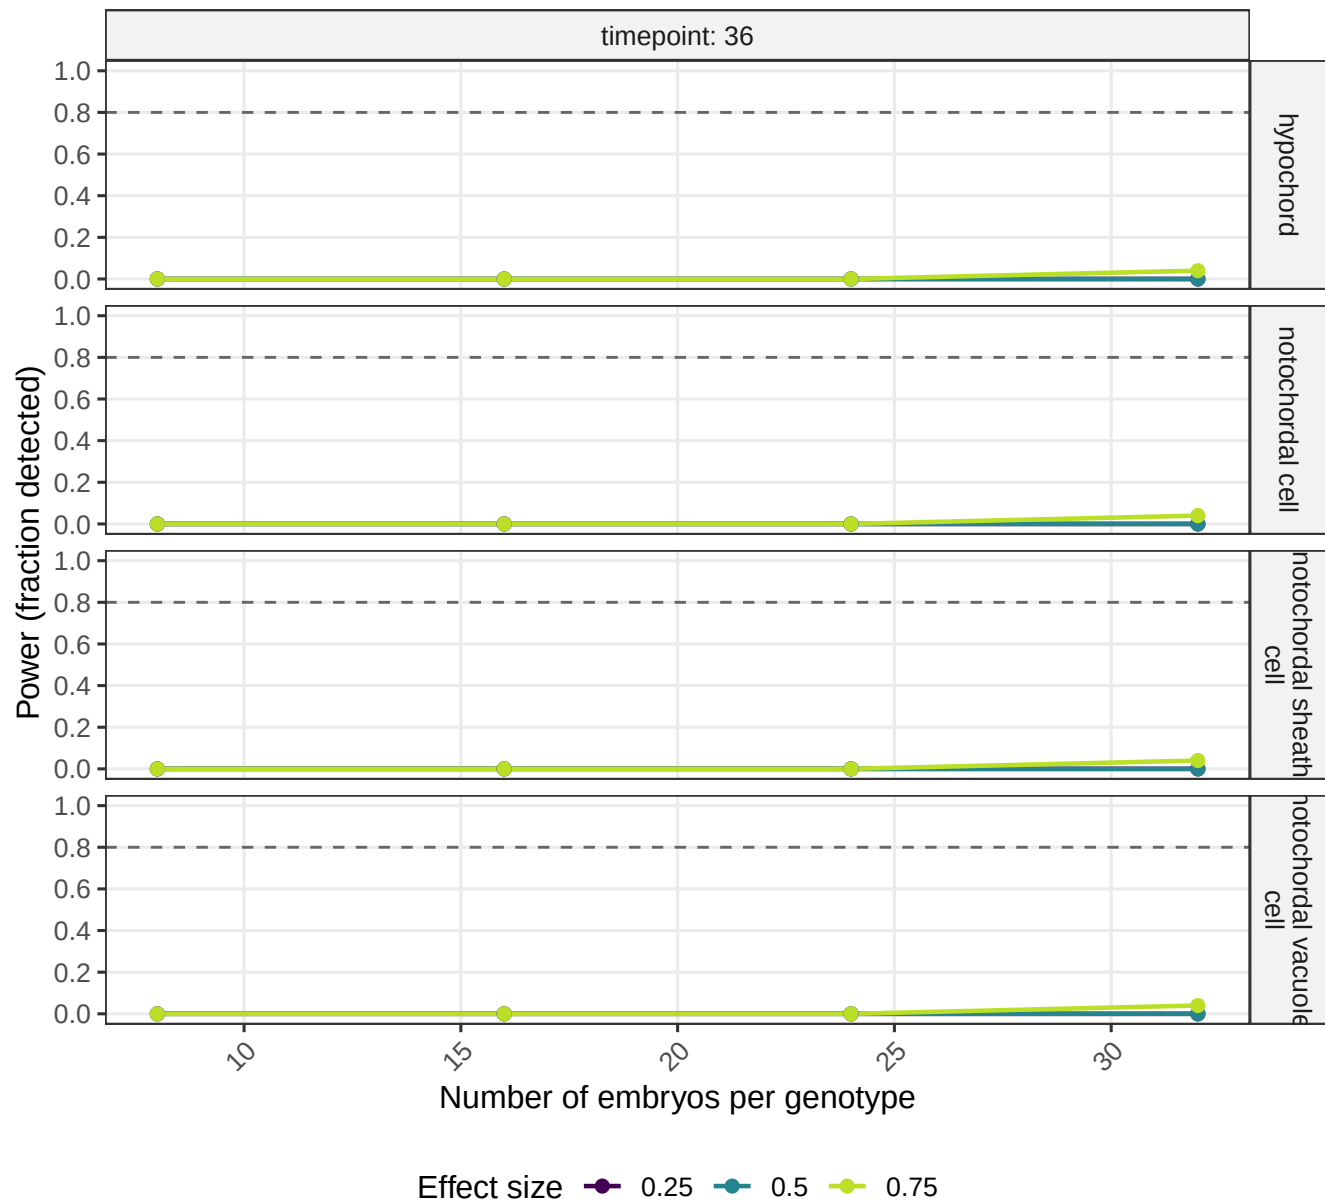

36

Timepoint

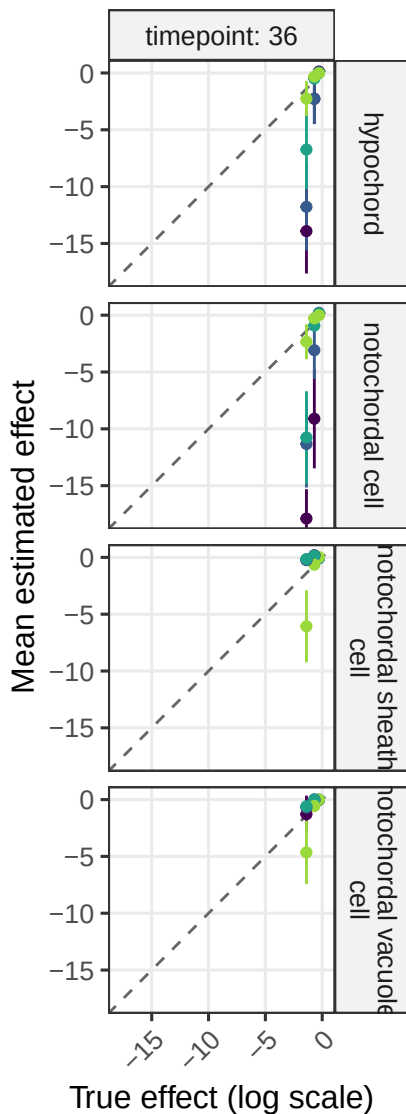

Power by embryo count and effect size

Dashed line = 80% power | $q < 0.05$

Effect size calibration (target cell types)

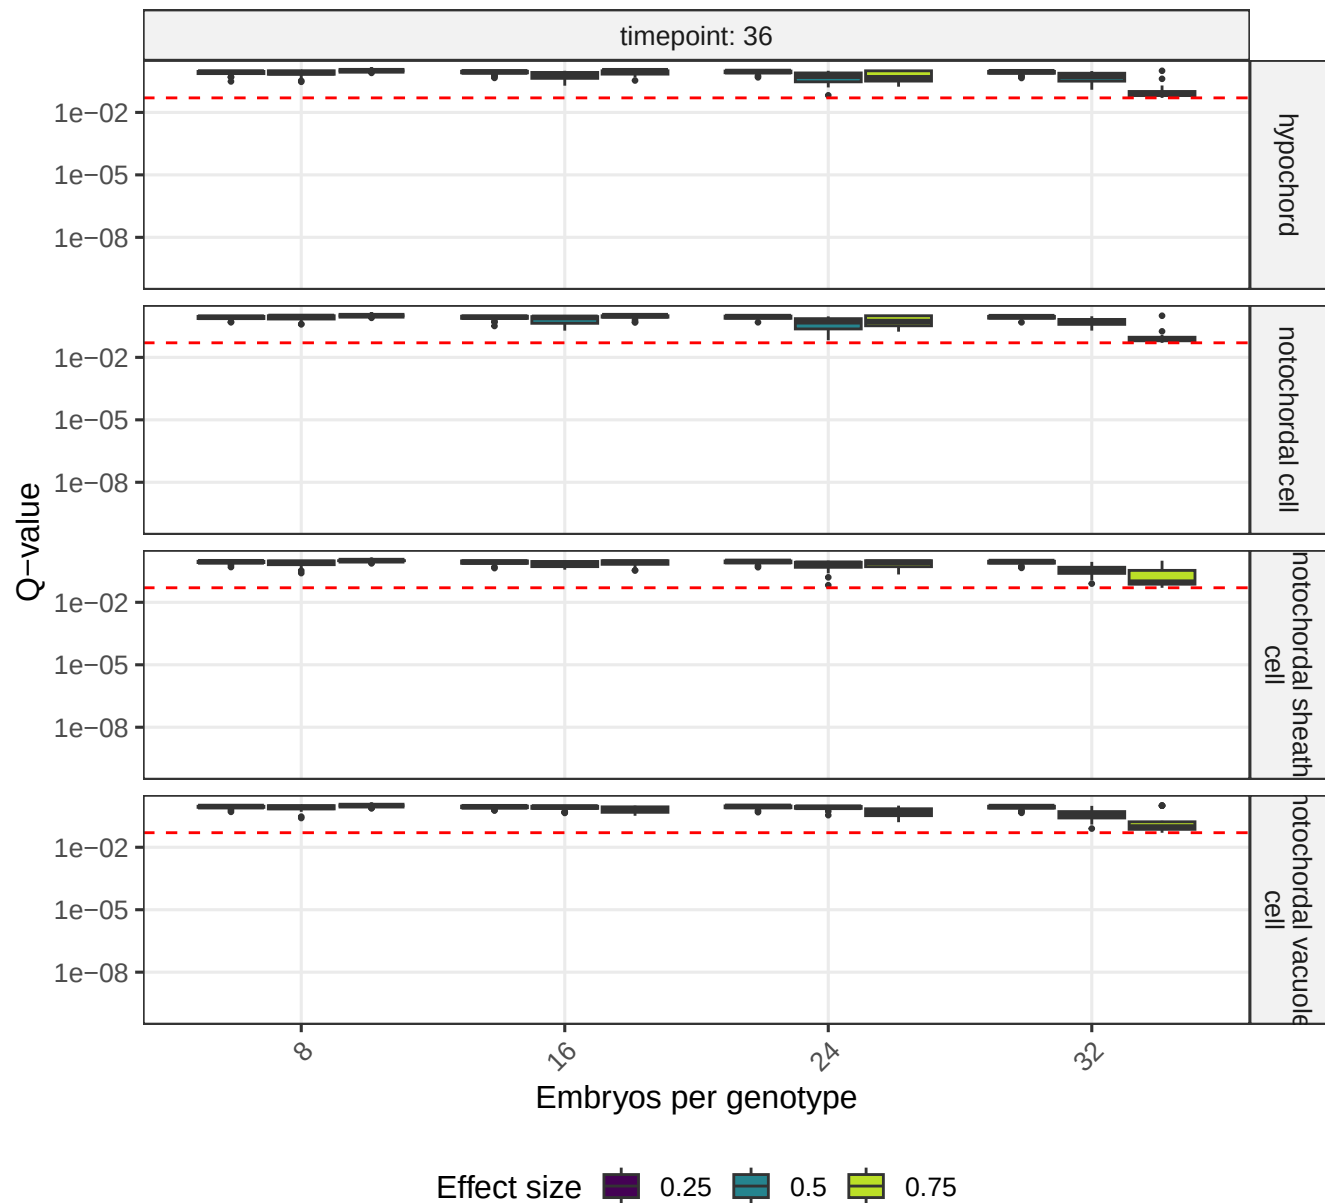

Dashed line = perfect recovery | error bars = ± 1.96 SE

Embryos 8 16 24 32

Q-value distributions (target cell types)

Red dashed = threshold (0.05) | y-axis log-scaled

Power to detect reduction in: hypochord, notochordal cell, n
v3.1.0 36 hpf | 25 simulations per grid cell | embryo_size = 6 | $q < 0.05$
